DETAILED ACTION

1. Claims 1-9 are currently pending in the instant application.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 12/19/2007 has been initialed by the Examiner.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provide by 37 CFR1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

4. The application has been amended as follows:

Please amend the title to read –Composition for coating organic electrode and method of manufacturing an organic conductive layer having excellent transparency using the composition–.

Withdrawn

5. The objection of claims 6 and 9 due to minor informalities is withdrawn in view of Application's amendment. The rejection of claims 1-9 are under 35 U.S.C. 103(a) as being unpatentable over Hirai (U.S. Pub. 2006/0006378 A1) is withdrawn in view of Application's amendment and remark.

Examiner's Statement of Reason for Allowance

6. Claims 1-9 are allowed over the prior art of record.

7. The following is an examiner's statement of reasons for allowance: The claims, filed on 12/19/2007, have been carefully reviewed and searched. The best prior art of Hirai (U.S. Pub. 2006/0006378 A1) failed to suggest or teach a composition for coating organic conductive layer comprising of a water-soluble organic solvent system within the claimed proportions wherein the sheet resistance of the organic conductive layer ranges from 300 to 900 ohms per square and a visible ray transmittance is more than 90%.

The newly found prior art Nishihara et al. (JP Pub. 08-022722) teaches a transparent conductive film coating comprising of a solvent mixture of amide and sulfoxide to product a low surface resistivity coating. However, Nishihara et al. failed to suggest or teach the coating composition comprising of a blend of PEDOT and PSS

Art Unit: 1796

polymer within the claimed proportion. Hirai and Nishihara et al. alone or in combination failed to suggest or teach a coating composition comprising the claimed ingredients within the claimed proportions having a sheet resistance ranging from 300 to 900 ohms per square and a visible ray transmittance of more than 90%. Therefore, claims 1-9 are allowed over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
